Exercise 6.1

Exercise 6.2

(a)

(b)

(c)

(d)

Exercise 6.3

Let $f\colon \mathbb{R}_{\geq 0} \to \mathbb{R}_{\geq 0}\colon f(x) = \sqrt{x}$ and $g\colon \mathbb{R} \to \mathbb{R}\colon g(x) = x^2$. We have that g(x) is not injective as it was shown in the lecture. The composition $g \circ f = g(f(x)) \ = (\sqrt{x})^2 = x$ is injective, since we have that for all $x, y \in \mathbb{R}_{\geq 0}$ with $x \neq y$ that $f(x) = x \neq y = f(y)$.

Exercise 6.4

Exercise 6.5

(a)

(b)
